

Benjamin Shore, MD

Current Practice/Center/Institution

Boston Children's Hospital

Medical School & Graduation Year:

University of Western Ontario, London, Ontario, Canada, 2003

Orthopaedic Residency and Fellowship Training:

University of Western Ontario, London, Ontario, Canada 2003-2008 (Residency)

Royal Children's Hospital, Melbourne, Australia 2008-2009 (Fellowship 1)

Boston Children's Hospital, Boston, Ma, USA 2009-2010 (Fellowship 2)

What attracted your interest to IPSG?

I was initially attracted to IPSG because of the opportunity to work side by side world leaders in the field of Perthes management. It is rare to assemble a large group of dedicated surgeons focussed on a common goal. IPSG embodies this mission and that is what attracted me to the group.

What would you say is the most challenging part of treating Perthes Disease?

One of the most challenging aspects of treating Perthes Disease is that the disease has it's own timeline. Often we hope for a rapid progression through the stages of Perthes; however, commonly the course is slow, with steady change presenting challenges for both patient and family.

What would you like to see accomplished through annual IPSG meetings?

Our goal is to develop consensus regarding the treatment we offer for children with Perthes disease. By standardizing care and limiting practice variation we can improve the overall care we deliver to our patients with Perthes disease.
