4. BC Children's Hospital, Vancouver, British Columbia

## **What attracted your interest to IPSG?**

Working with Dr. Joseph in India got me interested in research on Perthes disease. My interest in joining IPSG is with the hope that with this prospective research study we'll be able to find answers and better ways to manage this problem that's managed very differently in different parts of the world.

## **What would you say is the most challenging part of treating Perthes Disease?**

The most challenging part is really not understanding what the natural history is and who would benefit from treatment, and in whom you are not going to be able to change the natural history

## **What would you like to see accomplished through annual IPSG meetings?**

Through annual IPSG meetings, I would like to see that we're making continual progress to improve outcomes for this condition.
