

Scott Yang, MD

Current Position:

Doernbecher Children's Hospital
Oregon Health and Science University

Medical School & Graduation Year:

Northwestern University - 2009

Orthopaedic Residency and Fellowship Training:

Residency: University of Virginia
Fellowship: Children's Hospital Los Angeles

What attracted your interest to IPSG?

Perthes is a rare condition, and there is an immense need to come together as a group to learn how to treat this condition to the best of our collective abilities,

What would you say is the most challenging part of treating Perthes Disease?

The most challenging part of treating Perthes Disease is how it affects the children for a significant part of their childhood. The kids want to be active and run around, and it's difficult for patients and families to deal with a condition that takes years for the hip to remodel, and with variable outcomes.

What would you like to see accomplished through annual IPSG meetings?

I would like to see all surgeons and researchers come together to incrementally advance the knowledge and understanding of Perthes disease, so ultimately we can find the best way to treat patients and their families.
