

Scott Rosenfeld, MD

Current Practice/Center/Institution:

Texas Children's Hospital, Baylor College of Medicine

Medical School & Graduation Year:

University of Texas Health Science Center San Antonio, 2001

Residency: University of Texas Southwestern Medical School, Dallas TX

Fellowship: Boston Children's Hospital, Boston MA

**What attracted your interest to IPSG?**

I was a resident at TSRH. While there I participated in a research project on Perthes disease with Dr. Tony Herring. That sparked my initial interest in Perthes disease. Since then I have cared for many patients with Perthes disease and have shared my patients' frustration about why kids get Perthes disease and what we can do to successfully treat it.

What would you say is the most challenging part of treating Perthes Disease?

Not being able to tell the family with confidence (because I don't have good evidence to back it up) that my proposed treatment plan will fix their child's hip and improve their quality of life.

What would you like to see accomplished through annual IPSG meetings?

- New research ideas to further our understanding about the cause and treatment of Perthes disease
- Establishment of a good resource for families looking for information about Perthes disease
- Increased enrollment of patients into our study groups
- Improved physician and family awareness of Perthes disease to facilitate early referral to specialists
