What attracted your interest to IPSG?

The ability to work collaboratively with open minded surgeons across the country in an effort to find a solution to this challenging condition.

What would you say is the most challenging part of treating Perthes Disease?

The variability in disease amongst different patients and trying to predict the long term effects of our treatments when patients are much older.

What would you like to see accomplished through annual IPSG meetings?

Development and implementation of high quality clinical research to eventually answer treatment questions that to this point have been unanswerable in the care of Perthes disease.
